with one GREEN CUFF Smart single patient soft  
white Box of 10

Size 1	411.91873
Size 2	411.91773
Size 3	411.91673
Size 4	411.91073
Size 5	411.91473

As a pioneer in blood pressure measurement, for 125 years ERKA. has been supporting millions of physicians worldwide in their daily work. We have combined these experiences, based on the trust of our users, in an innovative digital blood pressure monitor for physicians. Absolute precision, the latest scientific measurement methods – validated according to the strict protocol of the European Society of Hypertension (ESH) – and perfected designs: this is the Erkameter 125 PRO.

The individual measurement methods PREVENTION, DIALOGUE and CLASSIC complement each other and were developed in close accordance with the recommendations of the ESH and the daily demands of everyday medical practice. The Erkameter 125 PRO reliably detects any arising motion artifacts and heart rhythm disorders. In addition, the innovative design and easy handling of the Erkameter 125 PRO enables use in virtually every routine medical situation.

#### PREVENTION

Whether in the hospital or in the doctor's office – each routine physical examination starts with a thorough measurement of blood pressure. The Erkameter 125 PRO quickly and accurately determines blood pressure with a fully automatic single measurement. The integrated memory documents up to 500 measured values. These are then clearly displayed and available for further processing and analysis.

#### DIALOGUE

Accurate blood pressure measurement in routine practice is even more convenient in the measuring mode – DIALOGUE. The measurement is fully automatic and the blood pressure value is calculated from the average of two single measurements in accordance with the “Guidelines for the prevention, detection, diagnosis and treatment of arterial hypertension” by the German Hypertension League. This scientifically based approach corresponds to the conventional understanding of correct medical blood pressure measurement and provides results which are a well-founded basis for any medical treatment discussion.

#### CLASSIC

The CLASSIC measurement mode supports the physician in his or her profession. The measurement is taken by auscultation with the stethoscope; only the pumping and memory is undertaken by the Erkameter 125 PRO.

#### MEMORY

Three memory areas are available to the user – each with 500 memory locations – corresponding to the modes PREVENTION, DIALOGUE and CLASSIC. Intuitive menu navigation, exemplary readability and a clear display of the measured values emphasize the user-friendly device design of the Erkameter 125 PRO.

#### DATA TRANSFER

Designed for integration into your existing practice or clinic software, the Erkameter 125 PRO meets the technical requirements for unhindered data exchange between the device and the electronic patient record.

For your individual system integration offer, please contact our Customer Service at +8000-CALL ERKA (008000-2255 3752).
